Bank of America and 401 N. Tryon Street Charlotte, NC

Lighting Designer:

Hartranft Lighting Design

Hartranft Lighting Design was hired by Bank of America/Jones Lang Lasalle to evaluate LED retrofit and replacement options for 401 N. Tryon Street as well as the Bank of America Building Main Lobby levels.

LED products were evaluated and photometric calculations were provided to identify the most appropriate LED product to effect cost savings and maintain or improve light levels.

Where light levels were not acceptable—i.e., did not meet recommended practice dictated by the IES, recommendations were made for lighting revisions or alternate retrofit products.
