Founder's Hall Charlotte, NC

Lighting Designer:
Hartranft Lighting Design

Hartranft Lighting Design was hired by Bank of America/Jones Lang Lasalle to provide an energy efficient, maintenance friendly solution for Founder's Hall.

Existing lighting was high wattage halogen to light the floor plane and high pressure sodium to light the middle section of the atrium frame. The existing light levels were sufficient, but the lighting was not flexible and the halogen fixtures were extremely difficult to reach, making maintenance extremely difficult.

Theatrical fixtures were the most energy and cost effective solution to replace the halogen lighting the floor. The beam spreads were wide enough to cut fixtures required by one third, and precise enough to accurately light the entire floor.

Color Changing fixtures to light the middle and upper atrium frame replaced the high pressure sodium. This allowed the space to render beautifully with carefully selected white light as well as providing color options for use as an event space.
